PROFESSIONAL SUMMARY

Computer Science & Engineering undergraduate (7th semester, graduating 2027) with a strong foundation in Data Structures & Algorithms using C++, along with working knowledge of Python. Experienced in collaborative academic software projects spanning database design, system functionality, and applied problem-solving. Currently building additional hands-on experience through self-driven projects in computer vision and applied AI. Fast learner seeking a fresher/internship software development role.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

Government College of Engineering, Keonjhar | CGPA: 8.0 | 7th Semester (Graduating 2027)

Higher Secondary (12th) — Guidance English Medium School, Dumduma, Bhubaneswar — 93%

Secondary (10th) — Modern Public School, Balasore — 95.4%

TECHNICAL SKILLS

Programming Languages: C++ (Data Structures & Algorithms), Python (basics), Java (basics), C

Core CS: Object-Oriented Programming, Database Management Systems (basic SQL), Operating Systems, Computer Networks fundamentals

Machine Learning: Basics

Tools & Practices: Git & GitHub (version control)

Other Skills: Creative Writing, Presentation Skills

PROJECTS

Attendance Management System

github.com/akrout9999-star/campus_desk_gce_kjr

Technologies: React 18, Firebase (Firestore + Auth), Vite, deployed on Vercel

- Collaborated with a team to design and build a system for structured, efficient tracking of student attendance.

Image Metadata Extractor

github.com/akrout9999-star/image-metadata-extractor

Technologies: Python, Pillow

- Built a Python program that extracts technical information and available EXIF metadata (format, dimensions, camera make/model, date-time, software, GPS availability) from image files.
- Documented that metadata can be missing, removed, or modified, so results reflect available data only, not proof of image authenticity.

Traffic Violation Monitoring System — Ongoing

- Developing a computer vision-based system to detect common traffic violations (e.g., signal jumping, lane discipline) from video feeds.
- Implementing vehicle detection and tracking as the foundation for automated violation flagging.

AI Support Desk — Ongoing

- Building an AI-assisted support desk to automatically respond to common queries and route complex tickets to the right team.
- Designing an intent-classification pipeline to categorize incoming queries.
